European Energy and Danske Commodities sign agreement to optimise co-located solar and battery park

Denmark, 28 July 2026. Energy developer European Energy and energy trader Danske Commodities announced today that they have signed an optimisation agreement for Agersted Energy Park. Agersted is a co-located solar park and battery energy storage system, which will provide clean and reliable energy for thousands of Danish households.

European Energy has selected Danske Commodities as its optimisation partner for Agersted Energy Park. Agersted is a co-located solar park and battery energy storage system (BESS), sited in Denmark's Brønderslev Municipality in the DK1 price area. The solar PV asset has a generation capacity of 30 MWp and is co-located with a battery energy storage system (BESS) rated at 10 MW with an energy storage capacity of 40 MWh, enabling the delivery of clean, flexible, and reliable energy to thousands of Danish households.

Agersted Solar Park has been in operation since 2021, and the co-located battery energy storage system (BESS) has now been integrated directly within the solar park. The BESS enables excess solar generation during periods of peak production to be stored and dispatched at times of higher electricity demand and stronger market prices, improving the utilization and value of the renewable energy produced by the park.

"Agersted demonstrates how co-located solar and battery assets can create additional flexibility and value for the energy system. With Danske Commodities as optimisation partner, we have a setup that allows us to manage both generation and storage efficiently across relevant energy markets," said Gregor McDonald, VP and Head of Energy Trading and PPA at European Energy.

Danske Commodities will be balance responsible party (BRP) & Balancing Service Provider (BSP) for the combined co-located asset.

"Adding this co-located solar and BESS asset marks another step in our growing portfolio and our strong partnership with European Energy. Backed by 20 years of power trading expertise and a fully automated algorithmic setup, Danske Commodities has established itself as a leading optimiser of renewables and flexible energy assets," said Dirk Kaiser, Head of Renewables Business Development at Danske Commodities.

As renewables become the backbone of the energy system, batteries offer the flexibility and fast response required to keep the grid stable.

Solar and wind energy production fluctuates based on weather conditions and the time of day, which leads to periods of over-production or under-production. By mitigating the intermittency of renewable energy sources, battery storage contributes to energy security and independence. It reduces the reliance on imported fossil fuels, helps countries meet their energy needs locally and facilitates a more sustainable energy future.

Through the optimisation agreement, European Energy and Danske Commodities will optimise energy production and storage at Agersted, providing much needed flexibility to the power market.

FACTS ABOUT AGERSTED ENERGY PARK

- Asset: co-located solar park and battery energy storage system (BESS)
- Location: Brønderslev, Denmark
- Generation capacity: 30 MW
- Storage capacity: 40 MWh
- Developer: European Energy
- Optimisation partner: Danske Commodities

ABOUT EUROPEAN ENERGY

European Energy develops, builds and operates renewable energy projects, including solar, onshore wind and Power-to-X facilities. Founded in 2004 and headquartered in Copenhagen, the company works across more than 25 countries to expand the availability of renewable electricity and support the energy transition. European Energy's activities cover the full project cycle from early development to construction, operation and asset management. European Energy has constructed more than 5 GW of renewable energy assets and currently has more than 60 GW of renewable energy projects in its pipeline.

ABOUT DANSKE COMMODITIES

Danske Commodities is an energy trading company that specialises in power and gas trading and offers balancing, optimisation and hedging services to energy producers and suppliers. Every day, the company completes more than 130,000 trades across 40+ countries, constantly moving energy from where there is more than needed to where it is needed most. Danske Commodities is a wholly-owned subsidiary to Norwegian energy company Equinor, operating under its own name and brand.
