Danske Commodities chosen as optimisation partner for one of the biggest BESS projects in the UK

Aarhus, Denmark, 23 September 2026. Energy trading company Danske Commodities announced today that it has signed a long-term optimisation agreement for Hunterston BESS, one of the biggest battery projects in the UK. Through the agreement, Danske Commodities will utilise its fully automated algorithmic setup to maximise returns across wholesale and ancillary services markets.

Danske Commodities has been chosen as one of the optimisation partners for Hunterston BESS. The battery storage asset is developed by Revera Energy, backed by global investment firm Carlyle (NASDAQ: CG).

Once operational, Hunterston BESS will have a capacity of 400 MW/800 MWh, making it one of the biggest BESS projects in the UK. Danske Commodities will provide trading and optimisation services through a long-term revenue floor.

"We are proud to be selected as one of the optimisation partners for a massive UK project like Hunterston BESS. The UK is a core market for us, and we look forward to further expanding our portfolio of flexible assets," said Jakob Sørensen, CEO of Danske Commodities.

Earlier this year, Revera Energy selected Danske Commodities as the optimisation partner for the 400 MWh battery Windyhill BESS. The agreement marked Danske Commodities' biggest battery deal at the time, and the partnership with Revera Energy is now expanding.

"We have a strategic ambition to be a leading player within energy trading and asset management. This ambition is built on strong partnerships with energy developers like Revera Energy," said Jakob Sørensen, and he concluded:

"With Danske Commodities' extensive experience from short-term power trading, we will utilise our fully automated algorithmic setup to maximise returns across wholesale and ancillary services markets for our partners."

Danske Commodities currently manages a contract portfolio of 17 GW of renewables and flexible assets across Europe.
